Surgical Masks Lean Production Units

Insights

Section 01

Back to local production

BE INDEPENDENT - the production of masks **MUST BE DONE** in **YOUR** country!

LOCAL production is the KEY, we are giving you the tools to make it happen.

Local Production of masks is the door to overcome the #Covid19 spreading, we are giving you the key to enter it. Sip-Italy provides you the right tools for Local mask Production according to your country standards.

Let's produce "LOCALLY"!

Be the **ONE** who makes the difference: produce masks "**LOCALLY**", bring back the production.

The #Covid19 pandemic pushes us to **think out of the box**.
The whole world must react and find solutions for our communities.

Our Company is glad to announce that **we have launched** onto the market a **new range** of automatic patented units for the **profitable** production of washable surgical masks.

In all countries, we **absolutely** need surgical masks in **large** quantities and **on time**. Someone has to make it happen **as soon as possible!**

Every single nation must have its own supply chain for the production of surgical masks, **not dependent** on the import of products from foreign manufacturers, without any guarantee of availability and delivery, production quality and **unstable purchase costs**. (eq. as Chinese ones).

When the emergency is over

RECOVER YOUR INVESTMENT

No money wasting, what you invest today will always be valued.

What you do today also matters tomorrow.

Following the outbreak of #Covid19, our company Sip Italy has launched onto the market a new range of automatic patented units for washable surgical masks lean production.

But we didn't stop there, we did more!

the investment in our equipment can be mostly reconverted later for garment production, and hopefully...not again for mask production!

In all countries, we absolutely need surgical masks in large quantities and on time.

Get in touch with us and find out our Sip-Italy Surgical Masks Lean Production Units.

Mask production 24/7

UNCOMPARABLE MODULARITY AND PRODUCTIVITY

As a reaction to #Covid19 outbreak, our Company started the production of new fully automatic patented units for surgical masks lean production.

We are a mechatronic company tech provider, with not only a proven high-end standard of engineering and manufacture for all our products, we have also been constantly exporting machinery and turn-key projects to around 30 countries around the world for many years.

Sip-Italy technical division was able to design an amazing modular technology for the entire process, starting from the rolls of fabric/non-woven material, obtaining the surgical mask in a fully automatic way, without direct workers.

We have different units and modules configurations, the great average productivity for our MASK.MODULE.4PLUS configuration is 3.000 surgical masks/hour.

What we offer you:

The production line is designed to produce eg. 3 layers of Surgical style Mask. The surgical style mask is the most commonly worn, cheap and disposable mask, which will limit the chance of inhaling large, infectious particles circulating near the face. Mask.module produces surgical styke masks, rectangular in shape, by coupling three layers of filtering fabric. We are introducing in different markets a different style of masks with, for example, the following construction:

- external layer: 100% natural cotton fiber, washable, possibility of customization with printing or embroidery
- middle layer: non-woven filtering fabric with barrier purpose, placed between the external and internal layer
- internal layer: 100% natural cotton fiber, washable, soft contact

UNCOMPARABLE MODULARITY AND PRODUCTIVITY

Complete unit for 24/7 masks production convertible into other processes
